Higher 30kW Capacity Rapidly Pressurizes a Chiller

- Microprocessor displays step-by-step operating instructions.
- When desired chiller pressure level is reached, the pump shuts down. Automatically re-energizes to maintain stable pressure.
- Microprocessor monitors chiller pressure and prevents over-pressurization.
- Thermal sensors prevent heating element overload and burnout.
- Sensor halts operations should water flow cease.
- Permanent mount unit is hard piped to a chiller. Maintains the chiller at slightly positive pressure during seasonal shutdown.
